One of the best new features for iPad is the ability to catalog your photos within the app. It's surprisingly easy to share, thanks to the Photos app's share preview, and lightroom for iPad includes a direct share to Dropbox, as well as two other options. One, that only works on the iPhone, is the Google Drive upload, which has been available for a little while now. Unfortunately, it is very slow and would make a great shame, if you can't work with either Lightroom or Photoshop on the iPad. I am sure that Apple will care to push developers on this one, but so far it's not there, and the Dropbox upload feels like a bit of a compromise. The UX issues are very similar to ones that I found present in CS4. That's not to say they are identical, but I just don't like the feeling that I'm navigating a web page instead of using an application. Another thing that I don't like is that the "save" button is still called "Save". It's so easy to save. But on the other hand, I like that the most recent changes to an image can easily be seen, which is something that Google's wave tool is trying to force me to do, and they don't know the first thing about software. *MacRumors* reviewed Photoshop CS6, and *TUMBLIN* reviewed Photoshop CS6. The price is the same as Photoshop CS3 and Photoshop CS4. I used CS2 (SP15) for many years, and I think I should just move on to Acornsoft MacRAW, as I like OSX more anyway. Both Photoshop and Lightroom still work for what I need them to do. I am not interested in buying more RAM, as I would need to buy more expensive RAM to replace my current RAM, and for what? To use a bloated, slow, and complicated vector tool that you also have to use to open the flattened images? I've just spent my entire day doing just that, swiping through an interface that feels like everything is a web page, and trying to understand which function I should use. Couldn't I just save a file every few days? *The one human interface element* that I am stunned by is that Adobe still has the "Save" button in the top tool bar. Of course it has, what else would you expect from a computer-savvy company? How stupid can you be to think that the ability to open an image in Photoshop to make changes to it is just as important as the ability to do the same to a creased, coated, and crinkly photocopy of it? Do you honestly expect me to search for the "File" menu when I open an image? It's so easy to save. For example, I am working on a crop and scaling an image: I click the Crop Tool and drag the crop window all the way to the edge of the image, and click the scale tool. All done. Do you really expect your customers to do that, or to imagine that they do?

Parents, have you seen the moment when a child draws a bar graph on a piece of paper, adds a straight line, and out pops an image of data analysis? The child may not even understand the mass and volume, but once the pencil touches the paper, he can't wait to color in the bar graph and cookie with a smile. These are moments when the child's artistic proclivities are awakened inside—and the rules are simple: when a child's looking, she should play. In today's announcement, Adobe has announced a suite of features for Photoshop that will do just that.
